Graph 5. Statistics not reported due to small numbers.

■ AC Present ■ AC Not Present ■ Unknown ■ Non-Functioning ■ No Electricity ■ Blowing Hot Air
 ■ Not in Use ■ Unknown

Graph 6. The first heat associated death occurred in May.

*Counts are preliminary and may increase as additional data are received.

Heat Caused (HC): Cases that mention heat or heat exposure in Part I of the death certificate causes of death (diseases or conditions in the direct sequence causing death), for variables cod_a, cod_b, cod_c, or cod_d. County of death: Maricopa.

Heat Related (HR): Cases that mention heat exposure in Part II of the death certificate causes of death (diseases and conditions contributing but not directly resulting in the death sequence), but not in any of the Part I variables (cod_a, cod_b, cod_c, or cod_d). County of death: Maricopa.

Under Investigation (UI): Cases the Maricopa County Office of Medical Examiner suspects are heat associated deaths.

Data Sources: Maricopa County, Office of Vital Registration and Office of Medical Examiner; Arizona Department of Health Services, Office of Vital Registration

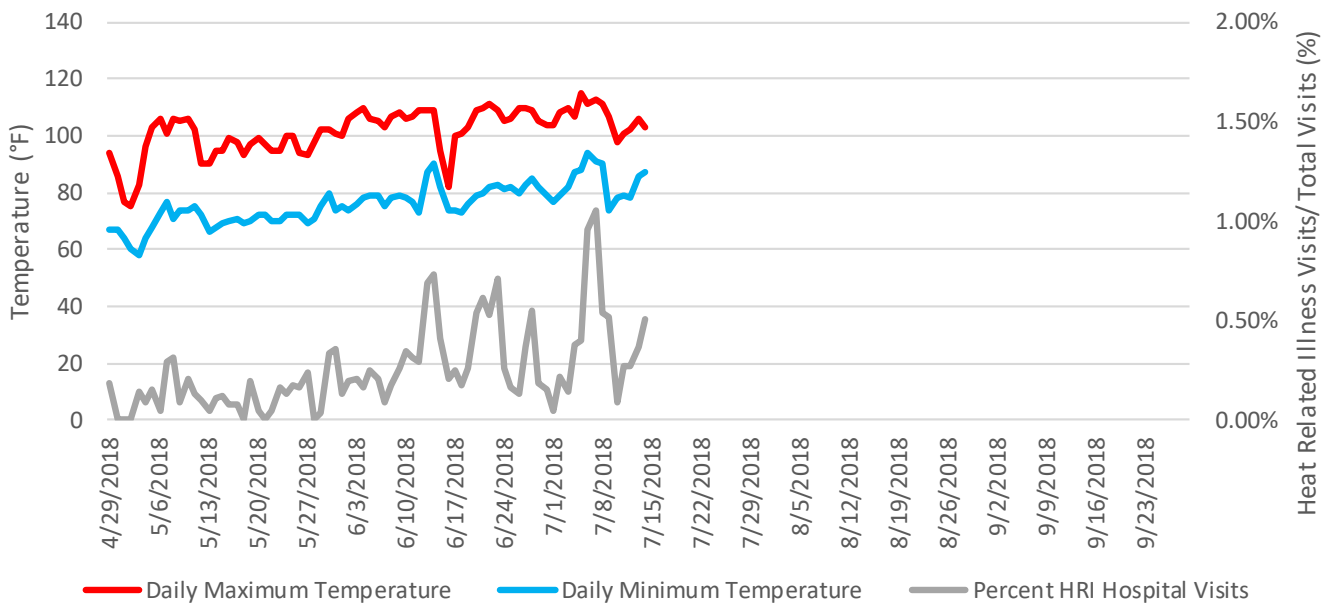

HEAT ASSOCIATED DEATHS & HOSPITAL VISITS

2018 WEEKLY REPORT

Week 28 (07/08-07/14)

Every year, hundreds of individuals visit Maricopa County hospitals due to environmental heat exposure and heat-related illness. Maricopa County Department of Public Health conducts weekly syndromic surveillance to identify these visits. Patient visit data from 13 Maricopa County emergency department and inpatient hospitals are available in near real-time and monitored to identify patients who may have experienced heat exhaustion or heat stroke. The National Syndromic Surveillance Program's BioSense Platform ESSENCE tool locates heat-related illness visits by identifying key terms and codes within the chief complaint field (i.e., the patient's stated reason for visit), admission reason field (i.e., the provider's noted reason for admission), and discharge diagnosis code field (i.e., ICD-9-CM and ICD-10-CM codes). Heat-related illness visits are displayed as a percentage of total hospital visits by day and monitored for trends.

Graph 7. The percentage of emergency and inpatient hospital visits due to environmental heat are not currently above expected levels.

Graph 8. More males than females have visited the emergency department due to environmental heat among the identified cases.

Graph 9. Most of the identified emergency department visits due to environmental heat have been among those 18-44 years of age.
