MCAQD NON-ROAD ENGINE DETERMINATION

BUSINESS NAME:

ENGINE DESCRIPTION (MAKE/MODEL):

DATE ENGINE INSTALLED:

A. Does your internal combustion engine meet the definition of non-road engine as explained below?

- i. Is the engine in or on a piece of equipment that is self-propelled or serves a dual purpose by both propelling itself and performing another function (such as garden tractors, off-highway mobile cranes and bulldozers)?
ii. Is the engine in or on a piece of equipment that is intended to be propelled while performing its function (such as lawnmowers and string trimmers)?
iii. Is the engine by itself or in or on a piece of equipment that is portable or transportable, meaning designed to be and capable of being carried or moved from one location to another (indicia of transportability include, but are not limited to: wheels, skids, carrying handles, dolly, trailer, or platform)?

If the answer is YES to any of these questions, please attach an explanation, and then proceed to Question B:
If the answer is NO to all of these questions, this engine does not qualify as a non-road engine.

B. Is the engine used to propel a motor vehicle or a vehicle used solely for competition?

If the answer is YES, this engine does not qualify as a non-road engine.
If the answer is NO, proceed to Question C.

C. Will this engine, or any replacement engines, remain at one location for more than 12 consecutive months? A location is any single site at a building, structure, facility or installation. As such, an engine is considered a stationary source unless it is determined that it is moved (for reasons other than to solely qualify it as mobile). Please note that any engine that replaces the engine claimed as non-road at a location and that is intended to perform the same or similar function as the claimed non-road engine must be included in calculating the consecutive time period.

If the answer is YES, this engine does not qualify as a non-road engine.
If the answer is NO, proceed to Question D.

D. Is the engine located at a seasonal source? A seasonal source is a stationary source that remains in a single location on a permanent basis (at least 2 years) and that operates approximately 3 months (or more) each year.

If the answer is YES, proceed to Question E.
If the answer is NO, this engine may qualify as a non-road engine.

E. Will the engine remain at the seasonal source during the seasonal source's full annual operating period?

If the answer is YES, this engine does not qualify as a non-road engine.
If the answer is NO, this engine may qualify as a non-road engine.

Based on information and belief formed after reasonable inquiry, the statements and information in this document are true, accurate, and complete.
